

Explicit register renaming: R10000 Freelist Management

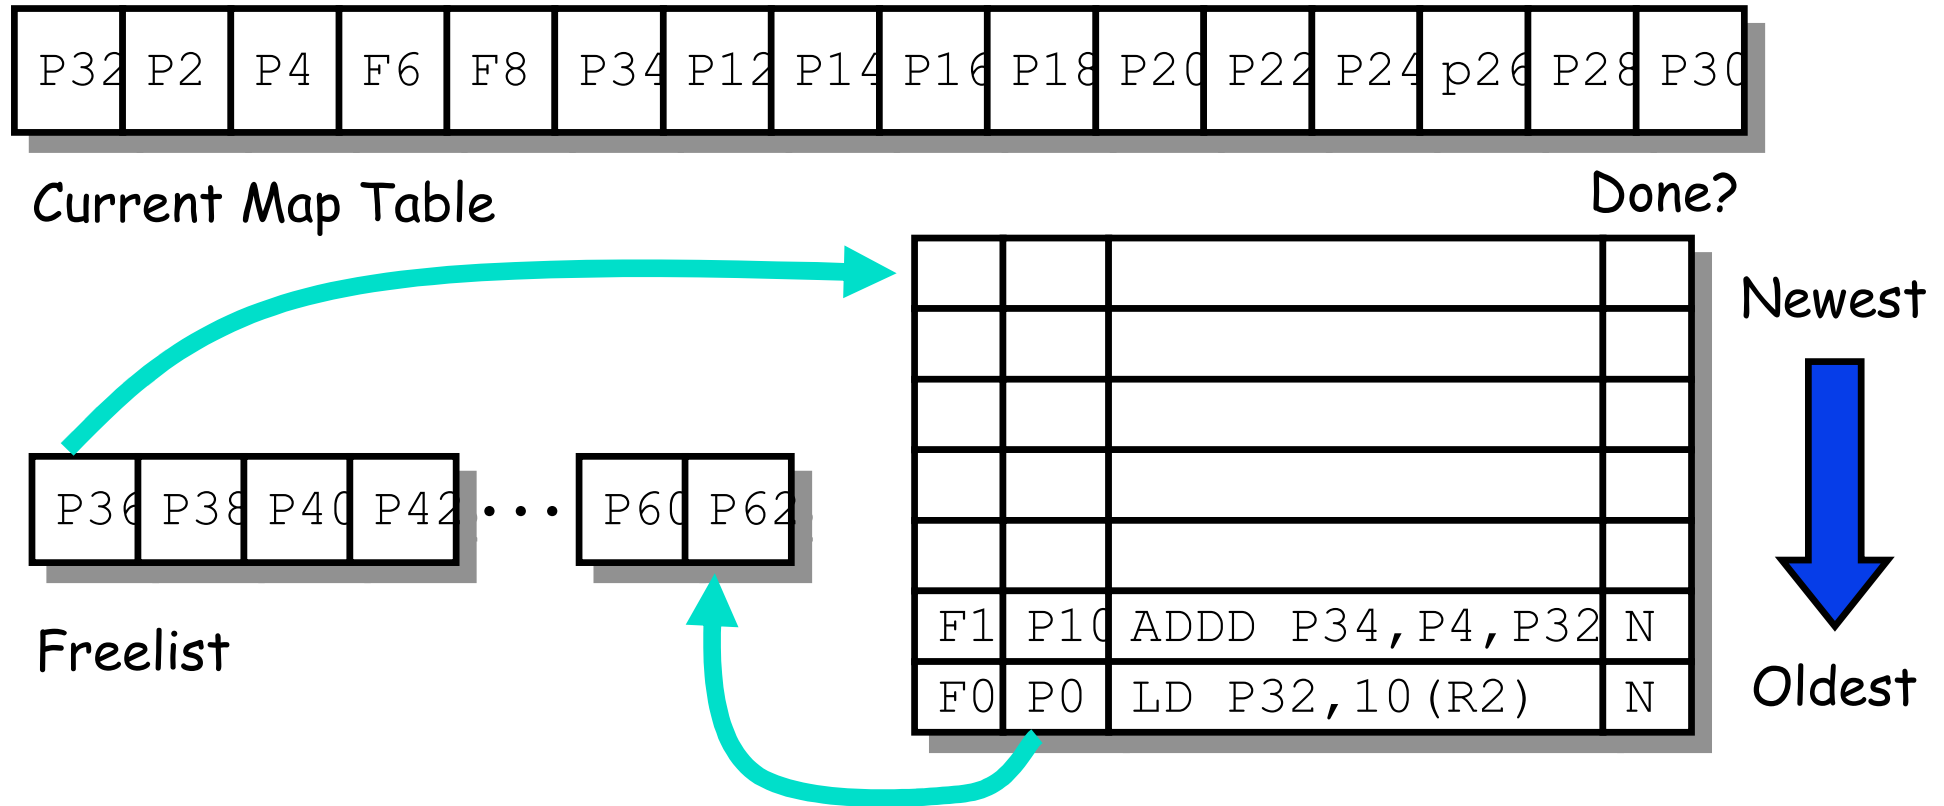

- ❑ Physical register file larger than ISA register file
- ❑ On issue, each instruction that modifies a register is allocated new physical register from freelist
- ❑ Used on: R10000, Alpha 21264, HP PA8000

Explicit register renaming: R10000 Freelist Management

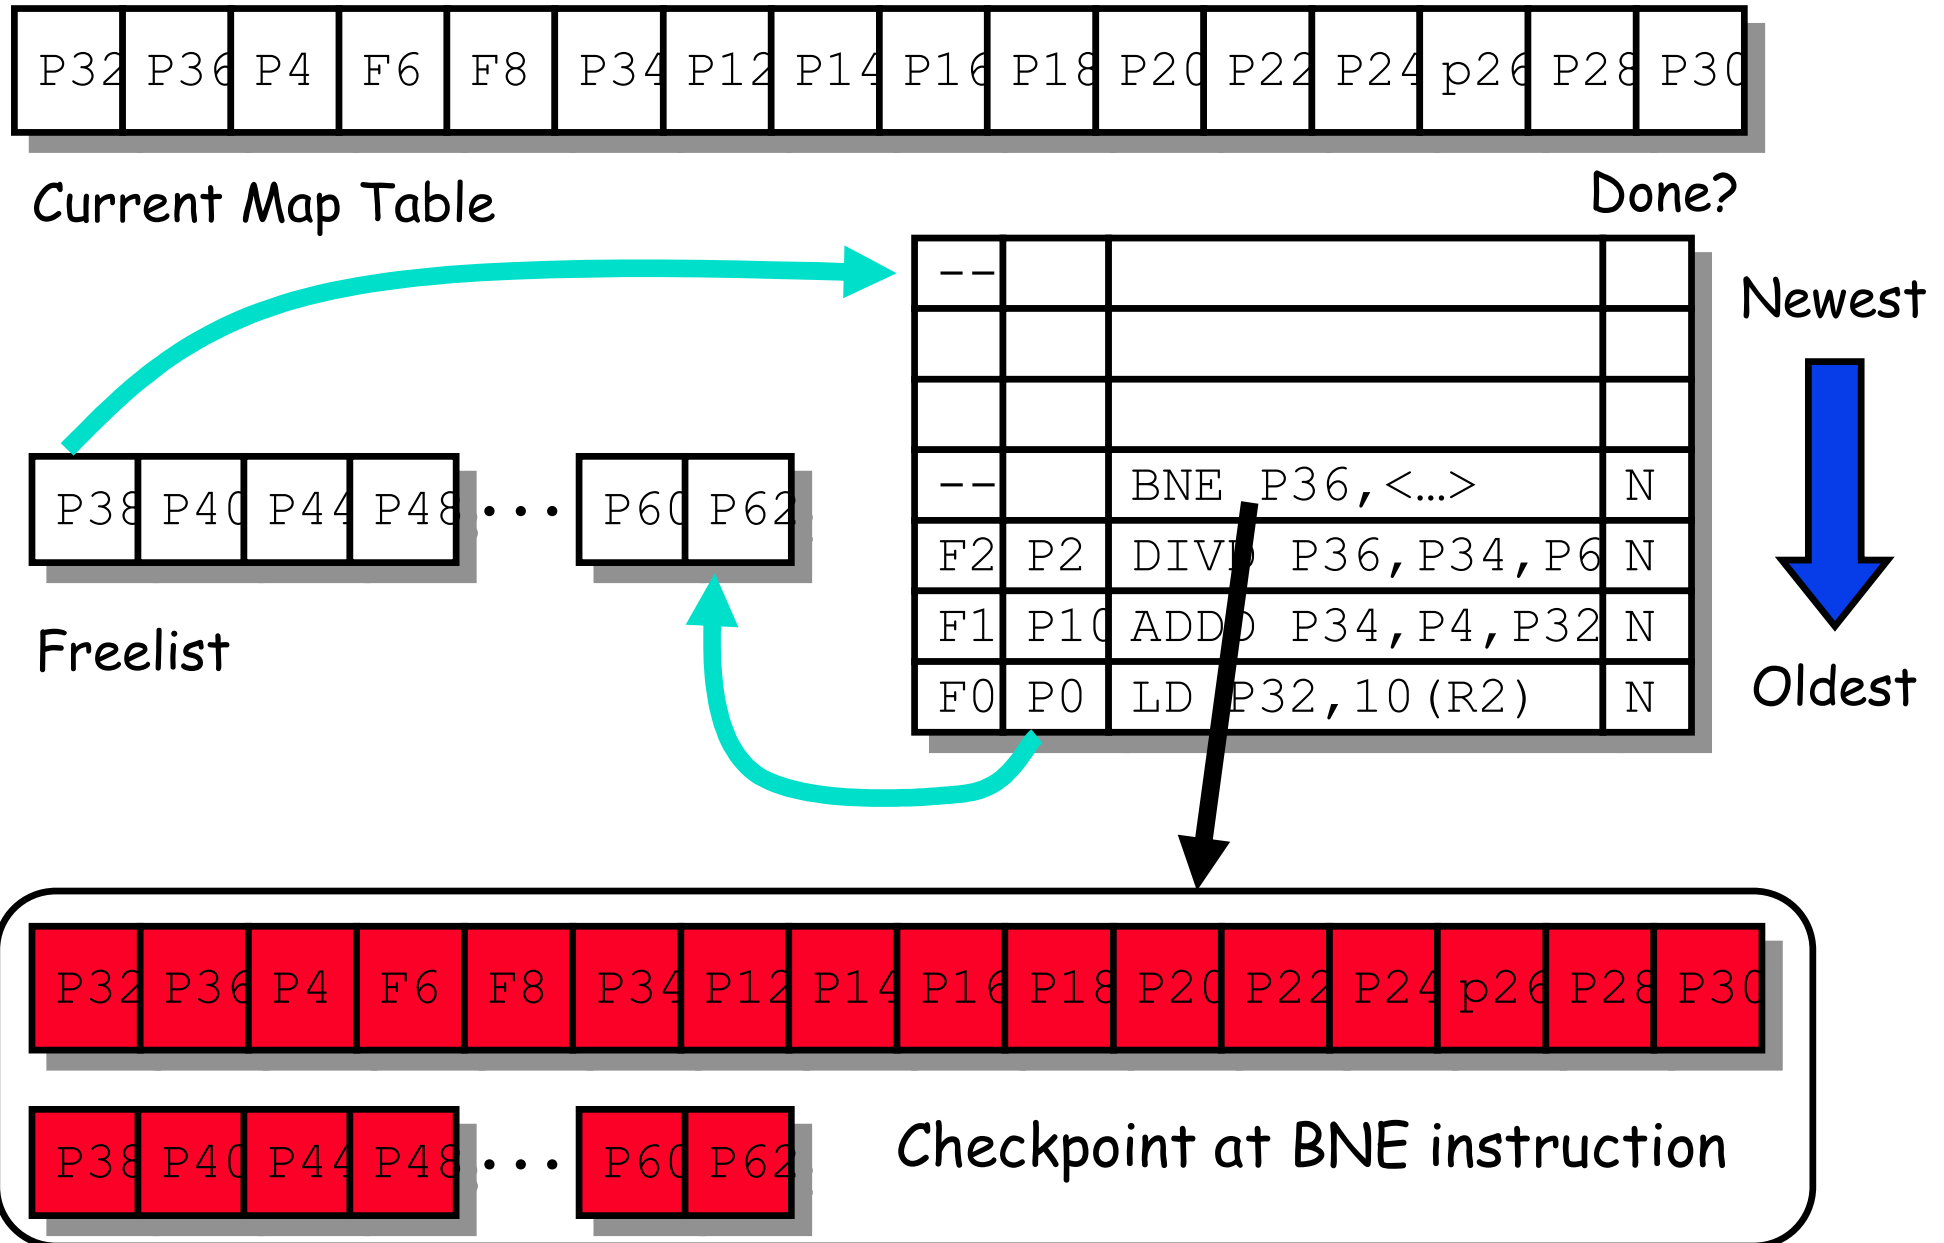

- ❑ Note that physical register P0 is “dead” (or not “live”) past the point of this load.
 - When we go to commit the load, we free up
